

LUKAS-VIDEO PLAYER

A set-top box for live and on-demand video from the internet

The Lukas-Video is a set-top box that can be used to stream video from the public internet, with a robust streaming protocol, easily integrated in a custom platform and still cost-effective.

The Lukas-Video plays live and on-demand video from the internet using Apple's HTTP Live Streaming (H264/AAC). This widely adopted protocol is robust for streaming over the public internet, so that this set-top box can be used in a wide range of settings. Particularly applications in which a video stream needs to cross the boundaries of networks, this set-top box can be used.

The Lukas-Video is compatible with Wowza Media Server and has a well-documented API. It takes no more than a couple of webpages with simple Javascript to get your own application running on the set-top box. Deploying was never easier.

The HDMI and composite video connectors on the Lukas-Video make it compatible to all TV sets in the field. Customers using old-school CRTs as well as customers with high-end flatscreen TVs are served equally well. With the included remote control the user interaction is simple and comfortable.

An excellent example of an application that uses the benefits of the Lukas-Video is Webcasting. E.g. churches can stream their services using Streamit's Maven audio-video encoder and have their members tune in using the Lukas-Video. No hassle with the managed lane of the digital TV provider.

The Lukas-Video is part of Streamit's complete solution which offers management, distribution, storage and playback of video and audio over internet. With help of Streamit's EventCaster it is easy to make the video or audio stream available to viewers all over the world. The use of international standards makes it easy to link the Lukas-Video with other systems and to use it for a range of other applications.

- **Live and on-demand video from the public internet**
- **Robust Apple HTTP Live Streaming**
- **Compatible with Wowza Media Server**
- **Multicast support**
- **Linked with EventCaster**
- **Easy integration with other platforms**
- **User-friendly remote control**
- **Wifi support through USB dongle**
- **Software update through USB**

TECHNICAL DATA

Lukas-Video set-top box
 Power supply
 Composite CVBS video cable
 Ethernet cable
 Remote control with AAA batteries
 User manual
